ROSTA APPLICATION FOR AGRICULTURE

ROSTA SE® TENSIONING RANGE

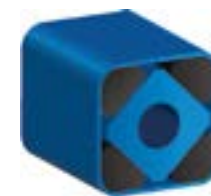

Balers: As a result of combining the characteristics of a spring, a pivot bearing and a vibration/shock damper, ROSTA tensioners ensure a smoothly run of belts and chains with greater efficiency.

Easy installation, long service life and durability of the dynamic tensioner provides the perfect solution for trouble-free operation of chain and belt drives with less maintenance.

The compact and lean design prevents accumulations of material in the transmission area.

If required, the elements are also available with galvanized construction and oil resistant rubber cords for extended protection.

ROSTA DR® RUBBER SUSPENSION UNIT

Another application with ROSTA – controlled unloading of the bale from the bale chamber to the ground.

Additionally, ROSTA elements can be used to protect the knives. If a hard material (such as stones, etc.) impacts the cutting area, the knife will move in a controlled fashion to avoid damages and then be returned to the working position.
